

TEJAS SONAWANE

AI Engineer · Agentic AI · LangGraph · RAG Pipelines · Python · FastAPI · React

tejas2025s@gmail.com | +91 8857073481 | [LinkedIn](#) | [Portfolio](#) | [GitHub](#) · India

Production AI engineer specializing in LangGraph-orchestrated agentic systems, RAG pipelines, and Generative AI workflows — shipping client-facing AI applications end-to-end.

EXPERIENCE

FlyYourTech · Full Stack & Agentic AI Engineer Intern 2026

- Architected and deployed production LangGraph agentic workflows (LangChain · LangGraph · Gemini API) for client-facing clinic/business operations — modeled multi-step planning loops as directed state graphs with explicit tool routing, context memory, and deterministic fallback logic.
- Built and evaluated production RAG pipelines using Qdrant and vector retrieval techniques, retrieval tuning, response validation, and source-grounded answer generation — supporting knowledge-base-powered query handling across multi-step conversational workflows.
- Instrumented AI workflows with LangSmith tracing to monitor agent execution paths, tool usage, latency, and model behaviour during debugging — enabling systematic root-cause analysis of agentic failures.
- Built async FastAPI REST API (Python · Pydantic · Docker · Git) serving as the AI inference gateway — sustained 50+ concurrent requests at sub-2s median latency with schema validation, error handling, and production deployment.
- Shipped client-facing AI streaming interface (React · TypeScript · WebSockets) with server-side token delivery and auto-reconnect — reduced perceived response latency by ~60%; debugged and raised structured output reliability from ~70% to >95%.

Google Summer of Code — OpenAFS · Open Source Developer 2025

- Navigated and contributed to a large, mature open-source codebase (OpenAFS) — explored system architecture independently, understood component interactions, and shipped production commits within the first sprint with zero hand-holding.
- Performed system-level debugging of async event handling for real-time OS state updates (GNOME Shell/GJS · D-Bus) — enforced strict layer separation and modular architecture to prevent regressions.
- Delivered all GSoC milestones on schedule for an international open-source community — demonstrating ability to self-manage, reason about unfamiliar systems, and produce reliable independent contributions.

PROJECTS

AgentDesk (Python · LangChain · LangGraph · pgvector · FastAPI · PostgreSQL · LangSmith) [GitHub](#)

- Built production LangGraph ReAct agent architecture with multi-tool reasoning loop — CRM retrieval, ticket creation, subscription lookup, and RAG knowledge-base search — deployed as a client-facing agentic customer support platform.
- Developed end-to-end RAG pipeline using pgvector, query rewriting, similarity search, retrieval filtering, and source-grounded response generation; implemented persistent conversation memory via langgraph-checkpoint-postgres.
- Integrated LangSmith tracing for full LLM observability — monitored agent execution paths, tool usage, latency, token consumption, and model behaviour; used traces for systematic debugging and evaluation.

BookMyDoctor (React · Node.js · REST API · MongoDB) [Live Demo](#) | [GitHub](#)

- Built a full-stack doctor appointment platform with role-based workflows, enabling users to book and manage appointments via both traditional UI and an integrated AI chat assistant.
- Engineered an AI-powered booking layer that allows conversational appointment scheduling using tool-calling and ReAct-style reasoning, seamlessly interacting with the existing booking system.

SKILLS

Languages: Python · JavaScript · TypeScript

AI & Agents: LangChain · LangGraph · AI Agents · Agentic Workflows · Tool Calling · Memory Systems · Planning Loops

RAG & LLM: Retrieval-Augmented Generation (RAG) · Vector Databases · Qdrant · Prompt Engineering · LLM Evaluation

AI Observability: LangSmith · LLM Observability · AI Monitoring · Execution Tracing

Backend: FastAPI · REST APIs · SQL · PostgreSQL · MongoDB · Node.js

Cloud & Tools: Git · Docker · AWS · CI/CD

Frontend: ReactJS · NextJS · Redux · Tailwind CSS · WebSockets

EDUCATION

Master of Computer Applications (MCA) · IMCC Pune · CGPA 7.23/10

2023 – 2025
